Figure 1 consists of 12 bar charts (a-l) showing the percentage of total catch for various fish species in the Chesapeake Bay. The species are: a) Atlantic croaker, b) Striped bass, c) Blue crabs, d) Spot, e) Weakfish, f) Bay anchovy, g) Atlantic silverside, h) Atlantic herring, i) Atlantic menhaden, j) Atlantic bluefish, k) Atlantic tomcod, and l) Atlantic silverside. Each chart compares the percentage of total catch for each species across different years (1980, 1985, 1990, 1995, 2000, 2005, 2010, 2015, 2020, 2025, 2030, 2035). The y-axis represents the percentage of total catch, ranging from 0 to 100. The x-axis represents the year. The charts show that Atlantic croaker and striped bass are the most abundant species, while Atlantic bluefish and Atlantic tomcod are the least abundant.
